1 Introduction

Compass Environmental was engaged by Jonathan Yap on behalf of VicUrban to conduct a Preliminary Site Contamination Assessment at the DEECD site located on the corner of McCubbin Drive and Robertsons Road, Taylors Lakes VIC ("the site"). The entire land parcel comprises an area of approximately 9.1 hectares and is currently a vacant grassed reserve.

The assessment was being conducted for due diligence purposes, prior to possible acquisition of the site. No previous environmental assessments have been identified.

2 Scope of work

The following scope of work was implemented:

- Site history review including:
  - Review of historical aerial photographs at the Land Information Office of the Department of Sustainability and Environment.
  - Historical title search to identify past registered proprietors of the site.
  - Enquiry to the local historical society.
  - Enquiry to the local water authority regarding site drainage plans and trade waste agreements.
  - Review of Cathodic Protection Systems Database (Energy of Victoria).
  - Review of EPA Priority Sites Register to assess whether Clean up or pollution Abatement Notices have been issued for the site or immediately surrounding properties.

- Appraisal of site geology and hydrogeology including:
  - Review of geological, hydrogeological and topographical maps.

- Site inspection including:
  - Detailed site inspection to determine current site condition and to check for any visual evidence of potential contamination.
  - Inspection of apparent condition and use of adjacent properties.

- Soil investigation comprising:
  - Bore logging and soil sampling at 15 locations (including 4 surface samples and 11 soil samples installed by GeoAust as part of their geotechnical program). The soil samples were collected from the auger flights from the geotechnical rig. All samples were subject to testing in the field for volatile organics using a photoionisation detector (PID). All bores were logged providing descriptions of soil and fill depth, details of sampling undertaken and results of PID testing.
  - Laboratory analysis program. The soil/fill samples were analysed for a range of potential contaminants identified by the site history search.

- Preparation of report detailing findings of the Preliminary Site Contamination Assessment.

3 Site Description

The site is located on the corner of McCubbin Drive and Robertsons Road, Taylors Lakes VIC and comprises two land parcels with a total approximate area of 9.1 hectares. Site identification details are provided in table 1 below. Current Certificates of Title are included in Appendix A.

Table 1 Site Identification Details

Allotment and Plan No	Referenced Certificate of Title Details
Lot RES1 PS342427	Volume 10178 Folio 827
Lot RES1 PS316588	Volume 08870 Folio 291

3.1 Surrounding Land Use

The use of the land in the vicinity of the site (as of May 2010) is described in table 2 below.

Table 2 Surrounding Land Use

Direction	Land use
North	Residential / Reserve
South	Residential
East	Residential
West	Overnewton Community College / Reserve

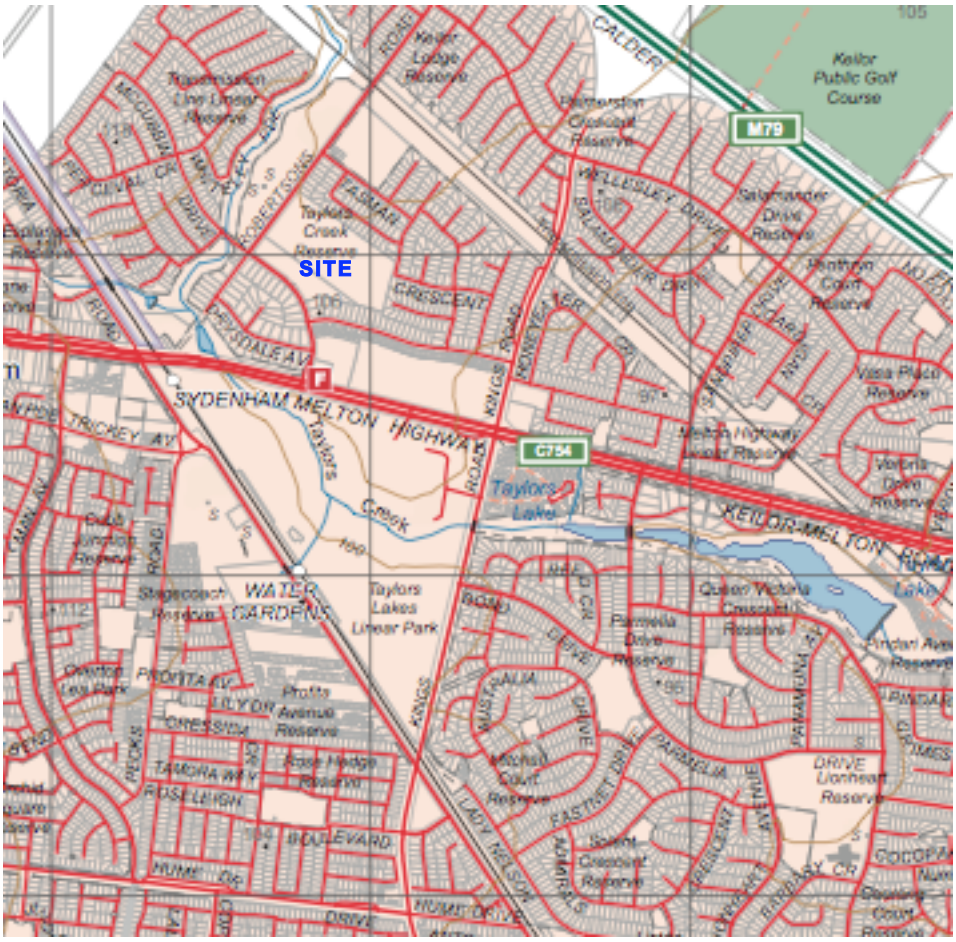
3.2 Council Planning Scheme

The site is zoned Public Use - Education (PUZ2) with an associated Schedule to the Public Use Zone and Residential 1 Zone (R1Z) with an associated Schedule to the Residential 1 Zone under the City of Brimbank Council Planning Scheme. No Planning or Environmental Overlays currently apply to the site.

The Planning and Property Reports are included in Appendix B.

3.3 Topography

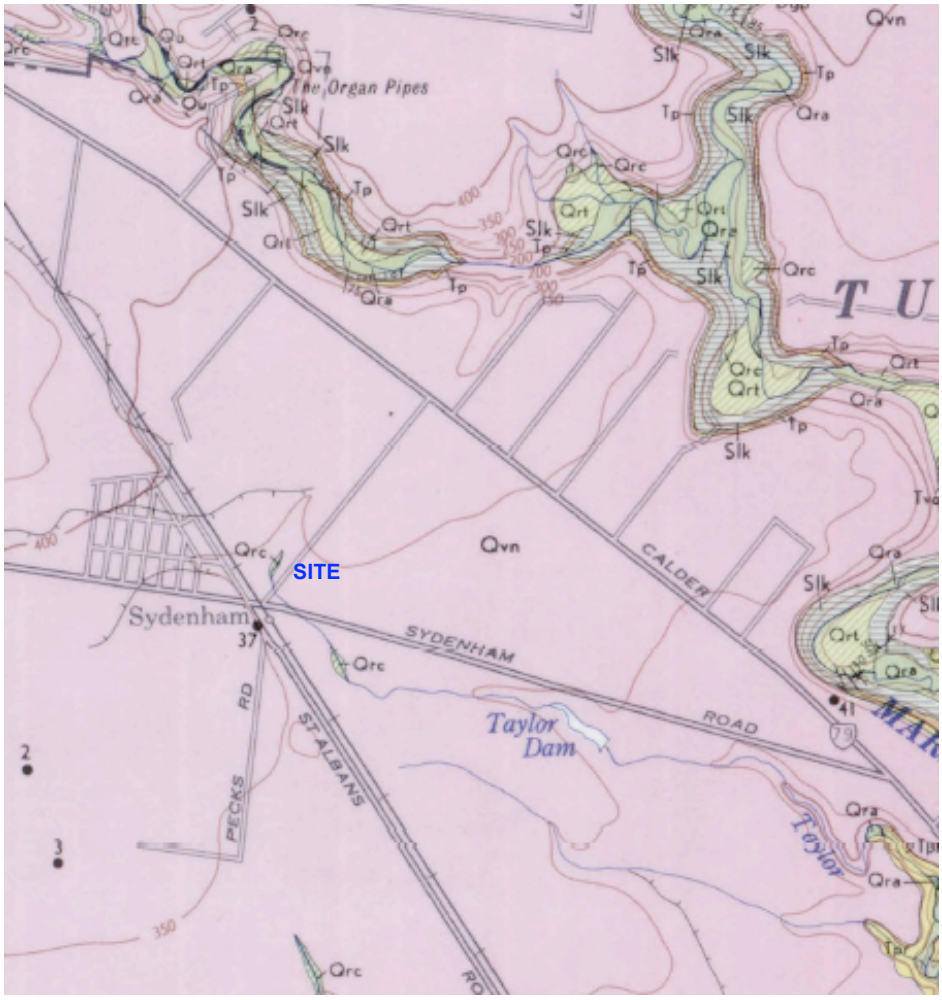
The site is relatively flat with a ground elevation of approximately 106 m AHD. The local topography shows a slight slope down towards Taylors Creek to the south west of the site (refer to topographic map below).



VicMap Topographic Map 1:30,000
Map No. T7822-1-3-3
(Note, all elevations are provided in m AHD)

3.4 Geology

The Geological Survey of Victoria 1:63,360 series Sunbury Map sheet (Part of No 7822, Zone 55) indicates the site is underlain by Tertiary Aged Newer Volcanics (Qvn). This unit comprises olivine basalt with minor limburgite, trachyandesite, scoria, thin interbedded sand, clay and tuff. The Newer Volcanics formation is underlain by Ordovician Formation, which consists of interbedded greywacke, shale and conglomerate. Quartenary Colluvium and minor slump deposits (Qrc) are present west and south of the site.



Regional Geology

(Extract from The Geological Survey of Victoria 1:63,360 series Sunbury Map sheet)

3.5 Hydrogeology

The hydrogeology of the area is broadly aligned with the underlying geology. The uppermost groundwater aquifer present in the vicinity of the site is the Newer Volcanics aquifer.

The Newer Volcanics basalts cover an area of approximately 2,575 km^2 and often exceed 150 m in thickness along pre-basaltic drainage lines but are thinner (around 40 m) over the interfluves (Leonard 1992). They form a continuous sheet like cover of Newer Volcanics that extends around the northern shore of the Bay from Melbourne to Geelong and northwards up into the highlands.

Groundwater flow in the Newer Volcanics basalts is very complex, with groundwater flow occurring in fractures and joints, vesicular openings as well as between basalt flows (Leonard 1989). The rate of groundwater flow within the basalt depends on the size, interconnectivity and frequency of the fractures and joints. The horizontal hydraulic conductivity is mostly due to interflow spaces whereas the vertical hydraulic conductivity is largely due to fracturing of partially solidified lava and shrinkage cracking (Leonard 1989). In some instances two or more flows form an aquifer system (Leonard 1989). In these cases individual aquifers are separated by aquitards or aquicludes represented by relict soils or low permeability layers of dense basalt.

Leonard (1989 and 1992) provides the following information on the typical characteristics of the Newer Volcanics aquifers:

- Saturated thickness: 10 – 100 m.
- Horizontal hydraulic conductivity: 1 - 35 m/d, with an average of about 8 m/d.
- Vertical hydraulic conductivity of clay aquitard: 0.004 m/d (average for West Footscray area).
- Transmissivity: 1 – 100 m^2/d.
- Effective porosity: 0.01-0.3, but mostly 0.02.
- Chemistry: The main anions in groundwater are often chloride, sulphate and bicarbonate, Major cations include sodium, magnesium and calcium. Nitrate concentrations are generally below 60 mg/L and generally show no correlation with salinity. Sulphate concentrations of up to 1,800 mg/L are reported with an average of 285 mg/L (Leonard 1992).

The uppermost groundwater aquifer beneath the site is expected to be present within 10-15 m depth. The nearest surface water body is Taylors Creek, located approximately 90 m to the north west of the site (at the closest point), with the Maribyrnong River located approximately 1,500 m north of the site.

4 Site History Review

The following sources of historical information were accessed:

- ❒ Historical aerial photographs at the Aerial Photography Library, Land Information Centre, Laverton.
- ❒ Enquiries to the local historical society
- ❒ Current and historical titles.
- ❒ EPA Priority Site Register.
- ❒ Energy Safe Victoria Cathodic Protection Systems database.
- ❒ Enquiries to Local Water Authorities regarding site drainage plans and trade waste agreements.

The results of the site history review are summarised below.

4.1 Review of Historical Aerial Photographs

Seven historical aerial photographs were selected for review. Observations interpreted from the photographs are provided in table 3 below. Copies of the aerial photographs are provided in Appendix C.

Table 3 Summary of Historical Aerial Photo Review

Photograph	Observations
12/1945 Run: 38 Film: 229 Photo: 63333 Scale: 1:6000	**Site:** The site appears to be grazing / farmland. Three small square structures and three larger rectangular structures are visible in the central west. These structures appear to align along the current boundary between the two land parcels. A road extends along the (current) boundary line (east / southeast to west / northwest) and curves perpendicularly toward the southwest at the point of intersection with the location of the buildings.
	Surrounding area: The surrounding area appears to be grazing or farmland. No structures are visible in the immediate vicinity of the site. A rural property with buildings is visible to the north (west of Robertsons Road). A second property with a large water body is present in the south. This water body appears to be fed by Taylors creek, which runs north to south (west of Robertsons Road) and curves toward the east, crossing through the property. A cricket ground is visible to the east / southeast. The Sydenham railway line extends northwest to south east adjacent to Sydenham Road. Associated buildings and rail carriages are visible.
01/1951 Run: 10 Film: 1423 Photo: 2 Scale: 1:12000	**Site:** Some disturbance to the structures in the central west is evident, with dirt roads or tracks extending behind the buildings; leading south. A small line of trees has been planted in front of the buildings. A large elliptical track is visible on the site and extends across the land immediately north.
	Surrounding area: No significant change appears to have occurred. Some disturbance is visible on the property to the south of the site. A large area to the north appears to have been cropped or graded, with an ovoid appearance.
02/1960	**Site:** Three of the previous structures are visible in the central west behind the tree line. An

Run: 9 Film: 1281 Photo: 96 Scale: 1:12000	oval track is present on the site. **Surrounding area:** Disturbance to the land immediately south (adjacent to Robertsons Road) is visible. No other significant changes are visible.
10/1968 Run: 15 Film: 2137 Photo: 154 Scale: 1:9600	**Site:** The track is more clearly defined and appears to have been surfaced. Plough or furrow lines are present across the site. Four buildings are now visible in the central west. An elliptical track is visible in the south east, extending into the property below the site. **Surrounding area:** A structure is present on the property immediately south (adjacent to Robertsons Road). Five new rectangular buildings and one small building are visible on the property to the south. The dam on this property has reduced in size by approximately 50%. Tilling or ploughing is visible on properties surrounding. No other significant changes are visible.
03/1975 Run: 29 Film: 2937 Photo: 60 Scale: 1:10000	**Site:** Two buildings are visible behind the tree line in the central west. **Surrounding area:** A residential structure with a semi-circular driveway is visible to the northwest of the trotting track, facing Robertsons Road. Three rectangular buildings are visible behind this residence. Residential development has commenced between Sydenham Road and Keilor – Melton Roads (to the west). Occasional properties are visible along Pecks Road (south). No other significant changes are visible.
03/1986 Run: 6 Film: 4019 Photo: 167 Scale: 1:25000	**Site:** No significant changes are visible. **Surrounding area:** Residential development has increased between Sydenham Road and Keilor – Melton Roads, (and in the greater area to the south east) with residential road layouts now visible. No other significant changes are visible.
10/1990 Run: 1 Film: 4347 Photo: 22 Scale: 1:10000	**Site:** An outer sand track is clearly visible surrounding the surfaced track. Some disturbance on the inner boundary of the track is present. The buildings in the central west are no longer present. **Surrounding area:** Four small square buildings are present behind the residence northwest of the trotting track (replacing one of the rectangular buildings). Residential development has continued between Sydenham Road and Keilor – Melton Roads, with residential roads now surfaced. Further development has occurred along Sydenham Road to the south. Roads have been laid and surfaced in the east. No other significant changes are visible.

4.2 Review of Historical Certificates of Title

Compass Environmental conducted a historical title search on 11 May 2010. The site is listed under two street addresses and is comprised of two land parcels:

18 - 24 Robertsons Road - Reserve 1 on Plan of Subdivision 316588A (SPI RES1\PS316588)
16 - 28 McCubbin Drive - Reserve 1 on Plan of Subdivision 342427D (SPI RES1\PS342427)

Copies of historical titles are provided in Appendix D.
A summary of information provided by the Certificate of Title is presented in table 4 below.

Table 4 Summary of Historical Title Review for the Site

Standard Parcel Identifier (SPI)	Certificate of Title	Parent Title	Date	Details
18 - 24 Robertsons Road - Reserve 1 on Plan of Subdivision 316588A				
RES1\PS316588	Vol 10133 Fol 468	Vol 08870 Fol 291	07 June 1993	Sole Proprietor: The Minister of the Crown for the time being administering the Education Act 1958
	Vol 08870 Fol 291	Vol 06612 Fol 395	29 March 1971	Proprietor: Lewis Leslie Welsh of Sydenham, Farmer and Grazier.
	Vol 06612 Fol 395	Vol 03586 Fol 106	12 March 1943	Joint Proprietors: Arthur Gunter, Harold Elliott Gunter and William Arthur Gunter all of Elizabeth Street Melbourne, Jewellers.
		Vol 03686 Fol 050		Not Reviewed

4.3 Enquiry to local historical society

Compass Environmental requested general information in regards to the site and the development of the Taylors Lakes area from the Keilor Historical Society. A summation of the information obtained is below. Information provided by the historical society is included in Appendix E.

- The suburb of Taylors Lakes and the Taylors Creek were named after Scottish immigrant William Taylor, who settled in Keilor in the late 1840s. William Taylor created the system of lakes along Taylors Creek.
- The Closer Settlement Board of Victoria acquired the majority of William Taylor's land in 1907 for subdivision.
- The trotting track identified on the site was used for private training by the local trotting identity Neville Welsh.
- The area remained rural until 1970, at which time residential development commenced south of the Keilor – Melton Road. Retail development commenced in the 1990s.
- The site was identified as the "proposed site for Brimank Secondary College" in the early 1990s, but has remained open land.
- The area surrounding the site was at the planning stage circa 1990 with development occurring post 1995.

4.4 Site Inspection

Compass Environmental conducted an inspection of the site on 24 May 2010. The site was vacant grassed land. Residential properties were located to the north, south and east. The Overnewton Anglican Community College (years Prep to 9) was located on the west side of Robertsons Road. No overhead services were present at the site.

4.5 EPA Priority Sites Register

A search of the EPA Priority Sites Register conducted on 11 May 2010 indicated that the site was not listed on, and is not in the vicinity of a site listed on the Register. The extract from the register is provided in Appendix F.

4.6 Cathodic Protection Systems Database Search

A search of Cathodic Protection database on 19 May 2010 failed to identify any cathodic protection systems at the site (refer to Appendix G).

4.7 Drainage Plans & Trade Waste Records

An enquiry regarding possible site drainage plans and trade waste records was made to Casey Properties Services (re: City West Water) on 10 May 2010. Compass Environmental was advised that no reticulated or sewer services were on record for this site.

4.8 Summary of Site History

A summary of the history of the site is presented in table 5 below.

Table 5 Summary of Site History

Year	Site	Surrounds	Main sources of Information
1840's - 1903	❒ Land was possibly used for grazing or agricultural use. ❒ Land was owned by William Taylor.	❒ Surrounding land was used for grazing or agricultural use. ❒ Land was owned by William Taylor.	Historical Society
1907 – 1950's	❒ Land was acquired by the Closer Settlement Board of Victoria for subdivision into small family farms ❒ Land was possibly used for grazing or agricultural use.	❒ Land was acquired by the Closer Settlement Board of Victoria for subdivision into small family farms ❒ Surrounding land was used for grazing or agricultural use.	Historical Society Historical Titles Aerial Photographs
1950's-1970's	❒ Land was used for private harness racing training ❒ A harness racing training track is present.	❒ Surrounding land was used for grazing or agricultural use.	Historical Society Historical Titles Aerial Photographs
1970's-1990's	❒ Land was used for private harness racing training	❒ Residential development commenced toward the west and south.	Historical Society Historical Titles Aerial Photographs

5 Potential for Site Contamination

5.1 On-Site

Based on the site history review, the identified main potential sources of contamination at the site are summarised in table 6 below.

Table 6 Summary of Potential On-site Sources of Contamination

Main Potential Sources	Main Potential Contaminants	Media
Possible presence of imported fill.	Metals, polyaromatic hydrocarbons, petroleum hydrocarbons, organochlorine pesticides, cyanide.	Shallow soils
Building rubble from demolition of former building onsite.	Asbestos, metals, polyaromatic hydrocarbons.	Shallow soils
Possible use of pesticides, herbicides and fertilizers.	Metals, organochlorine pesticides, organophosphate pesticides, herbicides.	Shallow soils
Possible use of fuels and oils associated with possible agricultural activities.	Petroleum hydrocarbons, phenols.	Soils

5.2 Off-site

The main potential off-site source of contamination was considered to be the use of surrounding land for agricultural farming. The potential for detrimental impact from this potential off site source of contamination was considered to be low.

6 Site Assessment Guidelines

6.1 Soil Assessment Criteria

The State Environment Protection Policy (Prevention and Management of Contamination of Land) (Land SEPP) provides a framework for the protection of land and associated beneficial uses in Victoria. The Land SEPP refers to the National Environment Protection Measure (NEPM) human health investigation levels (HILs) and ecological investigation levels (EILs) as the key objectives for the protection of human health and ecosystems. Chemical concentrations above the investigation levels would not automatically trigger remedial action, but indicate that further investigation and evaluation of potential risks will be required.

The protected beneficial uses of land associated with the proposed possible uses of the site (including possible residential (both low and high density) and public open space) are:

- Maintenance of modified and highly modified ecosystems.
- Human health.
- Buildings and structures.
- Aesthetics.
- Production of food, flora and fibre.

The criteria relevant to this site assessment are summarised below:

- NEPM Ecological Investigation levels (EIL) – Interim Urban have been used to assess potential environmental effect to flora and fauna in an urban context.
- NEPM Health Investigation Level A (HIL A) applicable to 'standard' residential use with gardens and accessible soils (including day-care centres, kindergartens, pre-schools and primary schools).
- NEPM Health Investigation Level D (HIL D) applicable to residential use with minimal opportunities for soil access.
- NEPM Health Investigation Level E (HIL E) applicable to parks, recreational open space and playing fields.
- Sulphate and pH to assess potential impact on buildings and structures. The Land SEPP states that the contamination must not cause the land to be corrosive to or adversely affect the integrity of structures or building materials. To assess potential impact on this beneficial use, the reported pH and sulphate concentrations were compared against criteria provided in AS2159-1995 (Piling-Design and Installation).
- There are no quantitative criteria for the assessment of aesthetic impacts, however the Land SEPP states that contamination must not cause the land to be offensive to the senses of human beings.

As the NEPM guidelines do not provide criteria for TPH in a readily usable format, the threshold concentrations for sensitive land use provided in the NSW EPA Guidelines of Assessing Service Station Sites have been adopted (NSW EPA, 1994).

The relevant assessment criteria are provided in table 1 in Appendix H.

6.2 Waste Disposal Criteria for Soils

The Victorian EPA is responsible for ensuring the proper storage, transport, treatment and disposal of waste in Victoria. The management requirements for different wastes taken off-site for re-use, treatment or disposal, and guidance on classifying contaminated soils according to their hazard level (A, B, or C) are provided in Industrial Waste Resource Guidelines (IWRG621-2009) – Soil Hazard Categorisation and Management (2009) (former EPA Publication 448.3 Classification of Wastes, 2007).

7 Soil Investigation

The soil sampling program methodology followed the general requirements of the NEPC (1999) and Australian Standard AS4482.1-2005.

7.1 Fieldwork

7.1.1 Soil Sample Locations

The soil sampling program involved collection of soil samples from 11 soil bore locations (B1 to B11, installed by GeoAust as part of their geotechnical assessment), and 4 surface samples (SS1 to SS4) as detailed in table 7 below.

Table 7 Sample Locations

Sample No.	Location
B1 to B9, B11	Grid layout locations; as selected by GeoAust
B10	South of tree line; former location of farm buildings
SS1 to SS4	South of tree line; former location of farm buildings

The sampling locations are shown in figure 1.

7.1.2 Soil Sample Methodology

Soil sampling was conducted on 24 May 2010. All soil bore locations were drilled by GeoAust using solid flight augers. Surface samples SS1 to SS4 (south of the tree line) were collected by stainless steel trowel. Samples were generally collected at 0.2 m, 0.5 and 1.0 m depth and at 1.0 m intervals to the base of the bores, and to suit the soil horizons encountered. All samples were subject to testing in the field for volatile organics using a photoionisation detector (PID). The PID was calibrated before the commencement of sampling.

Soil samples were placed in sample jars with Teflon seals provided by the laboratory and appropriately prepared. All samples were identified with a unique sample number, which was documented on the sample label, bore log and chain of custody form. A soil sampling record was filled in for each sampling location including a description of materials encountered, olfactory and visual evidence of contamination, PID readings, moisture conditions, sample intervals and numbers (refer to Appendix I).

All samples were placed in an ice-cooled esky immediately after collection. The samples were refrigerated and then transported on ice under chain of custody procedure to the analytical laboratory on the next working day. All field sampling equipment was decontaminate prior to use at each location

to prevent cross contamination. Decontamination of field equipment involved scrubbing in a Decon solution and potable water, and rinse in clean potable water.

7.2 Laboratory Analytical Program

7.2.1 Laboratories

The primary laboratory for the soil analysis program was Ecowise Environmental. The analysis of field split samples was undertaken by MGT Environmental Consulting and the asbestos analysis was undertaken by Australia Safer Environments and Technologies (ASET). All laboratories are accredited by the National Association of Testing Authorities (NATA) for the analyses undertaken. The exception was the analyses for total fluoride and hexavalent chromium by Ecowise, which were pending NATA accreditation. Qualitative asbestos analysis was conducted by Australia Safer Environments and Technologies.

7.2.2 Soil Analysis

A total of 18 primary soil samples and 3 surface samples were selected for analysis. The analytical schedule included a range of potential contaminants associated with the former uses of the site.

The implemented analytical schedule for primary samples included:

- One soil samples for EPA Publication (IWRG) Table 2 screen (comprising total recoverable hydrocarbons (TRH), monoaromatic hydrocarbons (MAH), polyaromatic hydrocarbons (PAH), organochlorine pesticides (OCP), polychlorinated biphenyls (PCB), fluoride, cyanide, volatile chlorinated hydrocarbons (HVOLs), chlorinated hydrocarbons (CHC), phenols (halogenated and non-halogenated, metals (arsenic, cadmium, chromium VI, cobalt, copper, mercury, molybdenum, lead, nickel, tin, selenium, silver and zinc)).
- 14 samples for metals (Sb, As, B, Be, Cd, Cr, Co, Cu, Pb, Mn, Mo, Ni, Se, Ag, Sn, V and Zn).
- 3 samples for PAH, TPH and OCP.
- 3 samples for pH.
- 2 samples for sulphate.
- 3 samples for asbestos quantitative analysis.

7.3 Field Quality Control Samples

The following quality control samples were analysed during the soil investigation program:

- One split sample was submitted for analysis to the secondary laboratory.
- Three duplicate samples were submitted for analysis to the primary laboratory.

No equipment rinsate samples were collected as all samples were collected with a new clean pair of disposable nitrile gloves. The quality control samples collected are listed in table 8 below.

Table 8 Soil Quality Control Samples

Quality Control sample ID	Type	Primary Sample ID	Laboratory	Analytes
B105/0.5	Duplicate	B5/0.5	Ecowise	pH
B109/0.2	Duplicate	B9/0.2	Ecowise	OCPs
B110/0.2	Duplicate	B10/0.2	Ecowise	Metals, TPH and PAH
B210/0.2	Split	B10/0.2	MGT	Metals

QA/QC results are discussed in section 7.3.

8 Results of Soil Investigation

8.1 Field Observations

No fill material was encountered during soil sampling, with the exception of locations B4 and B5 in the vicinity of the former harness-training track. The fill at these locations extended to approximately 0.1 m depth below ground level and generally comprised brown clayey silt (disturbed natural), with minor crushed rock and occasional plastic fragments.

The natural soils generally comprised brown clayey silt, with minor organic matter to depths ranging between 0.1 m and 0.3 m below ground level. The natural soils generally comprised brown silty clays, progressing to brown grey with white calcium carbonates and occasional basalt dusts. Basalt was encountered at variable depths across the site, ranging between 0.6 m and 4.3 m depth below ground level.

Soil vapour survey readings were all <5 ppm, indicating low potential for the presence of volatile contaminants. No fuel or chemical odours were encountered.

No asbestos fragments were noted at any sample location.

8.2 Soil Analytical Results

Soil analytical results are presented in table 1 in Appendix H. NATA endorsed laboratory reports and chain of custody forms are provided in Appendix J. A summary of the identified exceedences of the adopted soil assessment criteria is presented in table 9 below.

Table 9 Summary of Exceedences of Adopted Criteria

Analyte	Exceedences of adopted criteria (mg/kg)					
	NEPM EIL	NEPM HIL A	NEPM HIL D	NEPM HIL E	EPA FILL	EPA Cat C
Barium	300 mg/kg	NC	NC	NC	NC	NC
	B2/0.4 (480) B4/0.5 (320) B6/1.0 (770) B13/1.0 (650) B15/0-0.1 (440)	-	-	-	-	-
Manganese	500 mg/kg	1,500 mg/kg	6,000 mg/kg	3,000 mg/kg	NC	NC
	B2/0.4 (590) B11/0.2 (600)	-	-	-	-	-
Vanadium	50 mg/kg	NC	NC	NC	NC	NC
	B8/0.2 (52) B11/0.2 (55) SS1 (50)	-	-	-	-	-

Note: " NC " indicates no criteria
Concentrations in mg/kg

No asbestos fibres were detected in the 3 samples analysed.

Soil pH levels were in the range of 7.5 to 8.4 standard pH units, with sulphate in the range of 620 to 660 mg/kg.

8.3 Analytical Data Validation

A relative percentage difference (RPD) was calculated for each duplicate and split pair to obtain a quantitative measure of the accuracy of the results obtained. An RPD range of 30% to 50% is generally considered acceptable based on AS4482.1 (2005). The RPD data are provided in table 2 in Appendix H.

RPD results for the duplicate and split samples showed good correlation with 63 of 64 RPD values below 50%, showing an overall completeness of 98.44%. One elevated RPD for lead was associated with low analyte concentrations below the adopted criteria for a primary-split pair. The results showed good correlation for the duplicate and the split samples.

A review of the internal laboratory quality control program implemented by Ecowise and MGT showed acceptable results.

It was concluded that the sampling and analytical program was acceptable and the analytical data were of reliable quality for the purpose of this assessment.

8.4 Discussion of Results

The analytical data showed the following conditions at the site.

Metals

Fill material was observed at two of the eleven bore sites (bores B4 and B5). These bores corresponded with the position of the former harness racing training track. Fill depths ranged between 0.1 m and 0.3 m depth. No exceedences of adopted soil criteria were identified.

The underlying and natural soils showed all concentrations to be below the adopted ecological levels (NEPM EIL) and human health based levels (NEPM HIL A, HIL D and HIL E), with the exception of marginal exceedences of barium, manganese and vanadium at several locations. The barium, manganese and vanadium concentrations were considered to be associated with the natural composition of the soils (of basaltic origin). The natural soils were likely to classify as EPA Fill Material for off-site disposal purposes.

Further soil sampling will be required to adequately characterise soils for off-site disposal purposes.

Other Inorganics

Total cyanide and sulphate concentrations were below levels of concern. The reported pH and sulphate levels indicated non-aggressive soil conditions based on comparison with criteria for concrete piles in AS2159-1995.

Organics

The concentrations of PAH, TPH, HVOLs, chlorinated hydrocarbons, MAHs, and OCPs were either below the laboratory reporting limits or levels of concern.

The reported organic concentrations across the site were generally in the range for EPA Fill Material. Further soil sampling will be required to adequately characterise soils for off-site disposal purposes.

Asbestos

Sample analysis did not identify any asbestos fibres. No fragments of asbestos were identified during soil sampling.

9 Conclusions

Compass Environmental has completed a Preliminary Site Contamination Assessment for due diligence purposes at the DEECD site located on the corner of McCubbin Drive and Robertsons Road, Taylors Lakes VIC. The investigation comprised bore logging and soil sampling at 15 locations. Compass Environmental makes the following conclusions:

- The site was historically used for grazing and as a private harness racing training track. The site was purchased by the Crown in the early 1990s and has remained as vacant land since that time.

- No fill material was encountered during soil sampling, with the exception of locations B4 and B5 in the vicinity of the former harness-training track. The fill at these locations extended to approximately 0.1 m depth below ground level and generally comprised brown clayey silt (disturbed natural), with minor crushed rock and occasional plastic fragments.

- The natural soils generally comprised brown clayey silt, with minor organic matter to depths ranging between 0.1 m and 0.3 m below ground level. The underlying natural soils generally comprised brown silty clays, progressing to brown grey with white calcium carbonates and occasional basalt dusts. Basalt was encountered at variable depths across the site, ranging between 0.6 m and 4.3 m depth below ground level.

- Soil vapour survey readings were all <5 ppm, indicating low potential for the presence of volatile contaminants. No fuel or chemical odours were encountered.

- No asbestos fragments were noted at any sample location. Sample analysis did not identify any asbestos fibres within the soil.

- The soils showed all concentrations to be below the adopted ecological levels (NEPM EIL) and human health based levels (NEPM HIL A, HIL D and HIL E), with the exception of marginal exceedences of barium, manganese and vanadium at several locations (in natural soils). Soil pH was within the acceptable criteria range. The barium, manganese and vanadium concentrations were considered to be associated with the natural composition of the soils (of basaltic origin).

- Soils at the site are likely to classify as EPA Fill Material for offsite disposal purposes. Further soil sampling will be required to adequately characterise soils prior to offsite disposal.

11 Limitations

Compass Environmental has conducted this assessment in accordance with the scope of work and for the purpose outlined in the proposal dated 5 May 2010 and in this report. The services performed by Compass Environmental have been conducted in a manner consistent with the level of quality and skill generally exercised by the consulting profession.

This report is based on the conditions encountered and data reviewed between 6 May 2010 and 10 June 2010. Compass Environmental assumes no responsibility for any changes that may have occurred after this time. The methodologies and sources of information used by Compass Environmental are outlined in the report. Compass Environmental has made no independent verification of this information beyond the agreed scope of work and assumes no responsibility for any inaccuracies or omissions.

This report has been prepared for the use of VicUrban and may not contain sufficient information for purposes of other parties or users. Any reliance on this report by a third party shall be at its sole risk.

This report should be read in full and may be not used to support any other objectives than those set out in the report.

Further Planning Information

Planning scheme data last updated on 6 May 2010.

A **planning scheme** sets out policies and requirements for the use, development and protection of land. This report provides information about the zone and overlay provisions that apply to the selected land. Information about the State, local, particular and general provisions of the local planning scheme that may affect the use of this land can be obtained by contacting the local council or by visiting Planning Schemes Online

This report is NOT a **Planning Certificate** issued pursuant to Section 199 of the Planning & Environment Act 1987. To obtain a Planning Certificate go to Titles and Property Certificates

To view planning zones, overlay and heritage information in an interactive format visit Planning Maps Online

For other information about planning in Victoria visit www.dpcd.vic.gov.au/planning

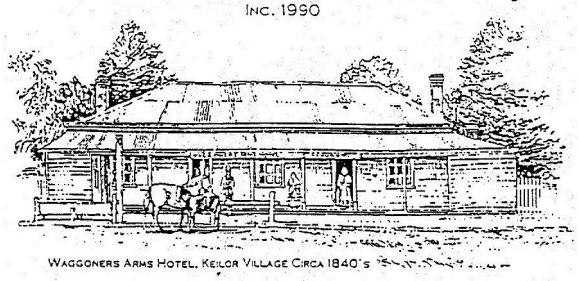
APPENDIX E

Keilor Historical Society Research Report

Keilor Historical Society
INC. 1990



Keilor Historical Society Inc.
ABN 78 696 736 709 Incorporation No. A0021913R

PO Box 263,
Keilor. Vic. 3036

SITE SEARCH: 16-28 McCubbin Drive, Taylors Lakes
18-24 Robertsons Road, Taylors Lakes

These two adjacent sites form one large site. Robertsons Road, which appears on old maps, originally ran from the Calder Highway to the Keilor-Melton Road but since the 1990s it no longer allows vehicular access to the Keilor-Melton Road. McCubbin Drive dates from the development of this area circa 1990.

The suburb of Taylors Lakes and the Taylors Creek, which flows through it, take their name from William Taylor, a Scottish immigrant, who settled in Keilor in the late 1840s after buying 13,000acres of land for sheep farming. He built "Ovenewton" (Melway 14 E2) a small homestead in 1849 and later added a tower; as a result of the extension it was referred to as "Overnewton Castle"

"Overnewton" was largely self sufficient; its water supply came from the Taylors Creek which flowed through William Taylors land. He created a series of small lakes along the creek to store water which was piped from the last lake in the series to a cistern on his property. Several of these lakes form a feature of the Watergardens Shopping Centre (Melway 3 E12) while further downstream other lakes are adjacent to the Taylors Lake Shopping Centre (Melway 13 K2).

After William Taylor's death in 1903, his land, with the exception of 200 acres surrounding "Overnewton", was sold to the Closer Settlement Board of Victoria in 1907 for subdivision. The Victorian Government at that time bought large pastoral properties for subdivision into smaller allotments which were made available at low rates of interest to families with limited assets. The aim of the scheme was to settle more people on the land and create a densely populated state of small family farms.

The area remained rural until circa 1970. At that time the Keilor- Melton Road was a country road with wide gravelled verges and a metalled strip in the centre. Residential development began on the south side of the Keilor-Melton Road in the 1970s with retail areas following in the 1990s.

A survey of the Melway Street Directories indicates that the area surrounding the site under review was at the planning stage circa 1990 and that development occurred from post 1995. For a short time in the early 1990s the site under review was shown as the "proposed site for Brimbank Secondary College" Apart from that the site has remained on the Melway maps as open land to the present.

We have no information relating to the track markings shown on the satellite image. However it is possible that a previous owner may have used that area for training horses in harness racing. Similar sites existed in the Keilor/Melton/Gisborne area.

SUMMARY To the best of our knowledge the site under review has been used for agricultural purposes from the late 1840s to circa 1970

PRIORITY SITES REGISTER REPORT:

A search of the Priority Sites Register for the above map references, corresponding to the address given above, has indicated that this site is not listed on, and is not in the vicinity of a site listed on the Priority Sites Register at the above date.

IMPORTANT INFORMATION ABOUT THE PRIORITY SITES REGISTER:

You should be aware that the Priority Sites Register lists only those sites for which EPA has requirements for active management of land and groundwater contamination. Appropriate clean up and management of these sites is an EPA priority, and as such, EPA has issued either a:

Clean Up Notice pursuant to section 62A, or a
Pollution Abatement Notice pursuant to section 31A or 31B

of the Environment Protection Act 1970 on the occupier of the site to require active management of these sites.

The Priority Sites Register does not list all sites known to be contaminated in Victoria. A site should not be presumed to be free of contamination just because it does not appear on the Priority Sites Register.

Persons intending to enter into property transactions should be aware that many properties may have been contaminated by past land uses and EPA may not be aware of the presence of contamination. EPA has published information advising of potential contaminating land uses. Municipal planning authorities hold information about previous land uses, and it is advisable that such sources of information also be consulted.

For sites listed on the Priority Sites Register, a copy of the relevant Notice, detailing the reasons for issue of the Notice, and management requirements, is available on request from EPA for $8 per Notice.

For more information relating to the Priority Sites Register, refer to EPA contaminated site information bulletin: Priority Sites Register & Contaminated Land Audit Site Listing (EPA Publication 735). For a copy of this publication, copies of relevant Notices, or for more information relating to sites listed on the Priority Sites Register, please contact EPA as given below:

EPA has published information advising of potential contaminating land uses. Municipal planning authorities hold information about previous land uses, and it is advisable that such sources of information also be consulted.

For sites listed on the Priority Sites Register, a copy of the relevant Notice, detailing the reasons for issue of the Notice, and management requirements, is available on request from EPA for $8 per Notice.

For more information relating to the Priority Sites Register, refer to EPA contaminated site information bulletin: Priority Sites Register & Contaminated Land Audit Site Listing (EPA Publication 735). For a copy of this publication, copies of relevant Notices, or for more information relating to sites listed on the Priority Sites Register, please contact EPA as given below:

SEARCH FOR CATHODIC PROTECTION SYSTEMS

With reference to your fax of 19/05/2010, a search of the CP database has failed to identify any cathodic protection systems at the following locations:

- **16-28 McCubbin Drive, Taylors Lakes**
- **18-24 Robertsons Road, Taylors Lakes**

Yours sincerely

Glenn Carrig

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 50 (1-1 x EQL); 50 (1-1 x EQL); 50 (> 1 x EQL))
***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories.
Any methods in the row header relate to those used in the primary laboratory

Samples tested as received. A blank space indicates no test performed. Soil results expressed in mg/kg dry weight unless specified otherwise. Microbiological testing was commenced within 24 hours of sampling unless otherwise stated. VIC-MM524: Plate count results <30 per mL and >300 per mL are deemed as approximate. VIC-MM526: Plate count results > 300,000 per mL are deemed as approximate.

GLOSSARY OF TERMS

UNITS

mg/kg	milligrams per Kilogram	**mg/l**	milligrams per litre
ug/l	micrograms per litre	**ppm**	Parts per million
ppb	Parts per billion	**%**	Percentage
org/100ml	Organisms per 100 millilitres	**NTU**	Units

TERMS

Dry	Where a moisture has been determined on a solid sample the result is expressed on a dry basis.
LOR	Limit of Reporting.
SPIKE	Addition of the analyte to the sample and reported as percentage recovery.
RPD	Relative Percent Difference between two Duplicate pieces of analysis.
LCS	Laboratory Control Sample - reported as percent recovery
CRM	Certified Reference Material - reported as percent recovery
Method Blank	In the case of solid samples these are performed on laboratory certified clean sands. In the case of water samples these are performed on de-ionised water.
Surr - Surrogate	The addition of a like compound to the analyte target and reported as percentage recovery.
Duplicate	A second piece of analysis from the same sample and reported in the same units as the result to show comparison.
Batch Duplicate	A second piece of analysis from a sample outside of the clients batch of samples but run within the laboratory batch of analysis.
Batch SPIKE	Spike recovery reported on a sample from outside of the clients batch of samples but run within the laboratory batch of analysis.
USEPA	United States Environment Protection Authority
APHA	American Public Health Association
ASLP	Australian Standard Leaching Procedure (AS4439.3)
TCLP	Toxicity Characteristic Leaching Procedure
COC	Chain of Custody
SRA	Sample Receipt Advice

QC - ACCEPTANCE CRITERIA

RPD Duplicates	Results <10 times the LOR : No Limit Results between 10-20 times LOR : RPD must lie between 0-50% Results >20 times LOR : RPD must lie between 0-20%
LCS Recoveries	Recoveries must lie between 70-130% - Phenols 30-130%
CRM Recoveries	Recoveries must lie between 70-130% - Phenols 30-130%
Method Blanks	Not to exceed LOR
SPIKE Recoveries	Recoveries must lie between 70-130% - Phenols 30-130%
Surrogate Recoveries	Recoveries must lie between 50-150% - Phenols 20-130%

GENERAL COMMENTS

1. All results in this report supersede any previously corresponded results.
2. All soil results are reported on a dry basis.
3. Samples are analysed on an as received basis.

QC DATA GENERAL COMMENTS

1. Where a result is reported as a less than (<), higher than the nominated LOR this is due to either Matrix Interference, extract dilution required due to interferences or contaminant levels within the sample, high moisture content or insufficient sample provided.
2. Duplicate data shown within this report that states the word "BATCH" is a Batch Duplicate from outside of your sample batch, but within the laboratory sample batch at a 1:10 ratio. The Parent and Duplicate data shown is not data from your samples.
3. Organochlorine Pesticide analysis - where reporting LCS data, Toxaphene & Chlordane are not added to the LCS.
4. Orgaonchlorine Pesticide analysis - where reporting Spike data, Toxaphene is not added to the Spike.
5. Total Recoverable Hydrocarbons - where reporting Spike & LCS data, a single spike of commercial Hydrocarbon products in the range of C12-C30 is added and it's Total Recovery is reported in the C10-C14 cell of the Report.
6. Recovery Data (Spikes & Surrogates) - where chromatographic interference does not allow the determination of Recovery the term "INT" appears against that analyte.
7. Polychlorinated Biphenyls are spiked only using Arochlor 1260 in Matrix Spikes and LCS's.
8. For Matrix Spikes and LCS results a dash "-" in the report means that the specific analyte was not added to the QC sample.
9. Duplicate RPD's are calculated from raw analytical data thus it is possible to have two two sets of data below the LOR with a positive RPD - eg: LOR 0.1, Result A = <0.1 (raw data is 0.02) & Result B = <0.1 (raw data is 0.03) resulting in a RPD of 40% calculated from the raw data.

Hawthorn East
VIC 3123

Attn:Mr Nathan Reynolds

Dear Nathan,
Asbestos Identification
This report presents the results of three samples, forwarded by Compass Environmental Pty Ltd on 25 May 2010, for analysis for asbestos. This report supersedes the report sent earlier today.

1.Introduction: Three samples forwarded were examined and analysed for the presence of asbestos.

2. Methods : The samples were examined under a Stereo Microscope and selected fibres were analysed by Polarized Light Microscopy in conjunction with Dispersion Staining Method **(Safer Environment Method 1 and Australian Standard AS 4964-2004.)**

3. Results : **Sample No. 1. ASET21750 / 24930 / 1. 1042 - Taylors Lakes - B2 - 0.2 A.**
Approx dimensions 6.0 cm x 6.5 cm x 0.45 cm
The sample consisted of a mixture of clayish soil, stones, plant matter and fragments of plaster.
No asbestos detected.

Sample No. 2. ASET21750 / 24930 / 2. 1042 - Taylors Lakes - B10 - 0.2 A.
Approx dimensions 5.0 cm x 6.0 cm x 0.45 cm
The sample consisted of a mixture of clayish soil, stones and plant matter.
No asbestos detected.

Sample No. 3. ASET21750 / 24930 / 3. 1042 - Taylors Lakes - SS 4A.
Approx dimensions 6.0 cm x 6.0 cm x 0.45 cm
The sample consisted of a mixture of clayish soil, stones and plant matter.
No asbestos detected.

Analysed and reported by,

Mahen De Silva . BSc. MSc. Grad Dip (Occ Hyg)
Occupational Hygienist / Approved Signatory.
